Trees Can Be
SUCCESSFULLY
PLANTED
Until March 10-15

Our Special Offer To You

Inclement weather during the month of January has doubtless caused many to postpone their pecan tree planting. To encourage business and double our sales for February over any previous February, we are offering for the remainder of the season a very unusual proposition, a special FIFTEEN PER CENT DISCOUNT on our regular prices. This is by far the most attractive offer we have ever made and one that you can not afford to pass up, if at all possible to make your planting this season.

More than 100,000
Good First Class
Trees To Select
From

At Left We Show A Planting of
One Acre—50 Feet Apart

To assure straight planting, set flagged stakes as shown at left. This will line up the rows A to B and C to D. With these two lines as guides, you will have no difficulty setting trees straight. Fifty feet apart is a fair distance for average land. On rich land 60 feet or more apart is better.

The 5-Acre Block Below Allows for 5 Extra
Trees—1 Extra Tree Per Acre

With each shipment we furnish printed and illustrated instructions on how to plant and handle pecan trees as they should be handled in order to get best results.

Six-Year Average Price Record Per Pound of National Pecan
Growers Exchange, a Cooperative Marketing Association:

YEAR	QUEEN GRADE	OVER GRADE	APEX	JUNIOR
1923	65c per lb.	45c per lb.	40c per lb.	30c per lb.
1924	65c per lb.	46c per lb.	40c per lb.	30c per lb.
1925	60c per lb.	43.7c per lb.	38.2c per lb.	30c per lb.
1926	52.5c per lb.	42.3c per lb.	33.7c per lb.	26.3c per lb.
1927	50c per lb.	38c per lb.	34c per lb.	28c per lb.
1928	51c per lb.	38c per lb.	34c per lb.	29c per lb.

Our Pecan Trees Have The Best Lateral or Side Root System Grown

Remember the root system to the trees you set is the foundation of your Pecan Grove. 90 to 100 per cent of our Pecan Trees should live and grow when given reasonable care.

This offer applies only on our regular prices which are printed on the other side and on orders placed during the remainder of this season only.

YOUR ORDERS WILL BE FILLED WITH ONLY FIRST CLASS WELL ROOTED TREES

Positively no trees will be shipped that are not first-class and up to our high standard.

WE HAVE THE PECAN TREES YOU NEED

Start That Pecan Grove Now

Pecan Trees can be successfully transplanted until March 10 to 15, but the sooner the better

Don't lose another year. They can never grow one inch for you until you give them a chance.

So mail your order TODAY.

Our Guarantee

We absolutely guarantee every pecan tree purchased from us to be high-grade, first-class stock; we guarantee every tree to have a good lateral root system.

If for any reason you are dissatisfied with any trees purchased from us—if any trees sent you do not come up fully to your expectations, you may return any unsatisfactory trees at once and we will immediately replace them with others that are satisfactory or refund your money.

You Can Do What Others Have Done

"AMONG all the money-making-possibilities in the South, pecan growing ranks first. There is no other enterprise you can follow with such great profit and safety," said R. C. Berckmans, International authority on horticulture and nut growing.

Far sighted people are investing in pecan orchards because their investigation proves that the bearing pecan orchard is profitable, not for a few years only, but permanently.

The table below shows an estimate of the probable yield of an acre orchard. The figures are not guaranteed, but are, to the best of our knowledge and belief, accurate and authentic.

	Per tree, based on average records of varieties developed	Average yield per tree	Average income per tree, nuts at 40c per lb.	Income per acre unit
4th year	a few nuts	-----	-----	-----
5th year	2 to 3 lbs.	2½ lbs.	\$ 1.00	\$ 20.00
6th year	4 to 5 lbs.	4½ lbs.	1.80	36.00
7th year	7 to 9 lbs.	8 lbs.	3.20	64.00
8th year	10 to 12 lbs.	11 lbs.	4.40	88.00
9th year	18 to 25 lbs.	21 lbs.	8.40	168.00
10th year	37 to 50 lbs.	43¼ lbs.	17.33	346.00
15th year	100 to 150 lbs.	125 lbs.	50.00	1,000.00
20th year	150 to 300 lbs.	225 lbs.	90.00	1,800.00

Remembering that at twenty years the pecan orchard is merely entering on its most productive period—that the average annual yield of a tree during the second twenty years is estimated to be four times as great as the yearly average during the entire bearing period preceding the twentieth year, you realize why Mr. Berckmans said, "You can leave no better inheritance to your family than a pecan grove. Whoever plants pecans, plants not for himself alone, but for his children and his children's children for generations to come.

The above statement and figures were not compiled by us, but by a reputable Pecan Company that's located in Georgia and who has 5,000 acres set to a Pecan Grove. We understand that this company got reports from a large number of groves and averaged them which gave the above figures.

We believe these figures are correct as they were compiled, but if you develop a grove that produces one-half of this amount wouldn't it be fine? To be very conservative if you only produce 25 per cent of this amount and had a grove that was established forever and getting better every year, could you beat it? Pecan growing is the best and safest investment that you or any one else can make.

TEXAS PECAN NURSERY

TYLER, TEXAS

Read Here What Our Trees Are Doing for Others—They Will Do As Much for You

I am enclosing a couple of snaps of first year trees purchased from you, which are considerably larger than trees purchased from another nursery which are a year older.

F. B. JOHNSON,
Oklahoma City, Okla.
(Mr. Johnson used our 2 to 3 ft. trees)

I bought two pecan trees from you 5 years ago, and gathered 5 gallons of pecans from them this year and they are fine.

GEO. VAN NOSTRAND,
10-28-28 Mineola, Texas

Just want to say I received the trees and set them out at once. They sure were fine trees. Could not have been better.

C. THOMPSON,
1-20-30 Deer Creek, Okla.

Your book to hand yesterday. Glad to get it. I bought of you last year 155 trees and lost five of them. Bought 244 at Monticello, Fla., and lost 110.

J. W. BOUCHER,
Ardmore, Okla.

I have planted 38 trees purchased from you. Set 10 in 1927 and 28 in 1928. Out of the 38 trees there are 37 living.

W. J. PATTERSON
10-29-29 Collinsville, Okla.

Trees are doing fine—have grown several feet in height. Well pleased.

L. E. BROOKS,
Oct. 1, 1929 Wharton, Texas

Something new to me, was to see some of my young trees from you maturing some nuts this year. One 5 year Schley produced 1 nut. A 4 year Burkett 5 nuts, a 4 year Texas Prolific produced 4 nuts and another 17 nuts. Some of my trees set as many as 46 nuts but most all trees shed the nuts before maturity, account no doubt for like of pollination.

JOE C. ANDERS,
10-22-29 Schulenburg, Texas

About 4 years ago my wife ordered three of your trees for the yard they are now bearing and the most beautiful trees for the age that I ever saw.

A. L. HIGDON,
11-16-29 Lampasas, Texas

The Success that I put out in Jan. 1928, matured four nuts this year.

H. D. GARRETT, County Atty.
10-16-29 Emory, Texas

Enclosed find check for \$76.00 for 56 more trees. The man that is taking this shipment is eighty years old and when he gets these out he will have fifteen acres set in young trees. He says that he has set trees from FOUR different nurseries and that your trees have the best root system he has seen.

W. T. BLEDSOE,
11-29-29 Atkins, Ark.

The pecan trees arrived OK, in fine shape and beyond a doubt the best I have ever gotten.

H. E. BASSETT,
12-6-29 Palestine, Texas

To begin with I was delighted with the trees and with the very vigorous root system that the trees had. I never lost a single tree out of the entire number that I planted. These trees have made splendid growth thus far and all are now bearing nuts of a superior size and quality.

My dealings with the Texas Pecan Nursery have been entirely satisfactory.

From a customer at Waxahatchie, Texas. 12-1-29.

Will state that we bought ten of the 9 ft. trees about December 1, 1921, and they are now nice large trees and look fine.

BARNETT BROS. MER. CO.,
12-19-29 Batesville, Ark.

The pecan trees I bought of you last year are all living and doing fine. They had the finest roots I ever saw. Herewith is order for 50 trees and check to cover.

A. R. PARRANE,
1-10-30 Manor, Texas

Last March we ordered 16 pecan trees from your nursery they have done so well we are setting more trees this spring.

N. E. TOWLE,
1-16-30 Keovil, Ark.

My records show that last February you shipped me five hundred and twelve (512) pecan trees, six feet high, and of several different varieties.

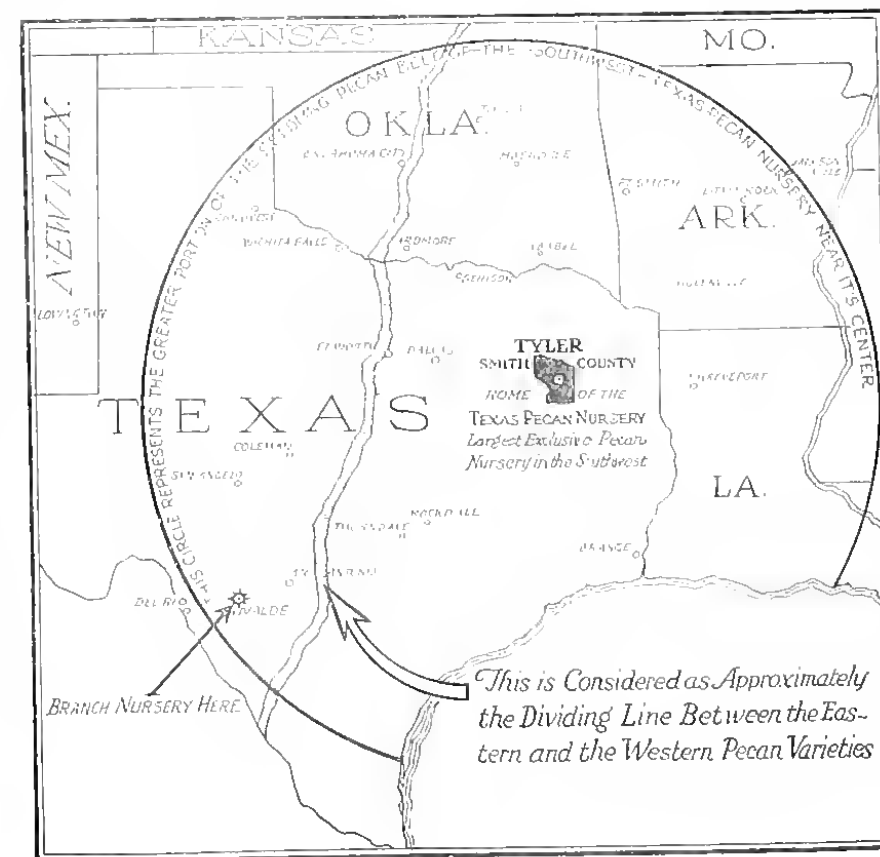

Holes for these trees were already dug, about fifty feet apart each way, about thirty inches in diameter and two feet deep, with a post hole in the center for tap root, and the trees were planted according to your printed directions, immediately on arrival, and out of the entire lot not a single tree that I know of has been lost, except three that were run over and broken down by a truck.

I think this remarkable result is mainly attributable to two things, first, the trees were exceptionally well rooted and vigorous, and second, they were carefully planted and properly attended to thereafter.

D. F. YOUNGBLOOD,
9-14-20 San Antonio, Texas

One of our own 10-year groves near Tyler, photographed October 10, 1929. This grove made \$175 per acre in pecans and a half bale of cotton per acre in 1928—total income per acre, \$216.25. Good land.

Remember our Trees Have all Been Budded or Grafted With Wood from Bearing Trees

EASTERN VARIETIES

STUART

The Stuart comes nearer being suited to all sections of the country and all soils than any other variety. A large nut, fills well, medium to heavy bearer. A hardy, fast growing tree. One of the earliest ripening of all large standard pecans. 48 per cent meat.

MONEY MAKER

Originated in Madison Parish, La. Widely disseminated. Size, medium; kernel, fairly plump; quality, fair; flavor, sweet. Very prolific. Especially suited to planting in the northern range of the area adapted to Southern varieties.

DELMAS

A very vigorous growing tree and heavy bearer, with splendid foliage, large nuts. 40 to 50 will make a pound. 55 per cent meat.

SCHLEY

This is an ideal Pecan. Large size, very thin shell, fills and shells out well; fine flavor. Rapid growing tree. Beautiful foliage, and the nuts sell for 10c to 20c more per pound than other varieties, but not quite so prolific as some of the other varieties. 60 per cent meat.

MOORE

A very fast growing tree. Medium size nuts, thin shells, good flavor, very productive, and one of the earliest to mature. About 56 per cent meat.

SUCCESS

A large and strictly first-class Pecan. Strong growing tree, early bearer, thin shell, cracks well, and the meats can be taken out in halves. Ripens almost ten days later than the Stuart, and is gaining prominence fast. 57 per cent meat.

WESTERN VARIETIES

SPECIAL PRICED TREES

BURKETT

BURKETT

Originated by J. H. Burkett at Clyde, Texas; one of the best varieties for West Texas. People in that section are setting more of the Burkett than of any other variety. Medium size, fills well, good flavor and prolific. 60 per cent meat.

OKLAHOMA

OKLAHOMA

Mother tree, Ardmore, Okla. Large nut with shape much like the Stuart. Thin shell. About 40 to the pound. A heavy producer. The tree is rugged, with drooping or willowy branches. Matures rather late. We believe this will make a good variety for Texas also.

TEXAS PROLIFIC

TEXAS PROLIFIC

This variety is a large size nut, shell of medium thickness, with kernel plump, rich and sweet. It is a heavy producer and we believe should be planted extensively in West Texas. It is showing up well on a small scale in East Texas. The Texas Prolific will not disappoint you.

HALBERT

HALBERT

Young trees inclined to be crooked, but get straighter as the trees grow older. Very early and prolific bearer. Medium size nuts, very thin shell, excellent flavor. A good tree for black waxy land. Should not be set in Mississippi, Louisiana, East Texas or East Oklahoma. 57 per cent meat.
